COBIT 2019 Foundation

Course Introduction

COBIT has been used by enterprises to improve the management of enterprise IT and governance. In the age of technology-enabled business strategies, the COBIT 2019 framework has emerged as an indispensable framework. COBIT 2019 builds on the popular COBIT5 framework, which provides globally accepted principles, practices, analytical tools, and models designed to help business and IT leaders maximize trust in, and value from, their enterprise's information and technology assets. COBIT 2019 continues to integrate existing ISACA risk and value management frameworks into an established governance framework provided for in earlier versions of COBIT.

This training course is designed to introduce participants to the COBIT 2019 framework and governance concepts. This course will help participants make decisions concerning the use of technology in support of organizational objectives. This framework helps both business and technology leaders address the needs of all stakeholders, from shareholders to regulators, across the enterprise.
