FortiMail

Course Introduction

This training course is designed to provide participants with the basic concepts of using FortiMail to protect your network from existing email-borne threats, and integrating it with FortiSandbox to detect and block emerging threats.

The interactive labs will enable participants to explore the role of FortiMail as a specialized device and how its features extend beyond FortiGate email filtering to provide both high-performance and in-depth security for business-critical communications. Participants will analyze email security challenges that administrators of small businesses and carriers face, and learn where and how to deploy, manage, and troubleshoot FortiMail.

FortiMail

Learning Objectives

- ✓ Gain a comprehensive understanding of the system architecture of FortiMail: how email flows through its modules; how it applies intelligent routing and policies to email; and how it can protect the priceless reputation of your message transfer agent (MTA)
- ✓ Position FortiMail in an existing or new email infrastructure using any of the flexible deployment modes
- ✓ Utilize the existing LDAP server to manage and authenticate users
- ✓ Secure email transmission using best-in-class technologies such as SMTPS, SMTP over TLS, and Identity-Based Encryption
- ✓ Block spam using sophisticated techniques such as deep header inspection, spam outbreak, heuristics, and the FortiGuard Antispam service
- ✓ Eliminate spear phishing and zero-day viruses
- ✓ Integrate FortiMail with FortiSandbox for advanced threat protection (ATP)
- ✓ Prevent accidental or intentional leaks of confidential and regulated data
- ✓ Archive email for compliance
- ✓ Deploy high availability (HA) and redundant infrastructure for maximum uptime of mission-critical email
- ✓ Diagnose common email-related and FortiMail-related issues
