MSF Desalination Plant Operation & Performance Ratio Calculations

Course Introduction

Desalination technologies play a big role in supplying fresh water especially in Gulf area where shortage of Fresh water supplies is present. In this short course emphasize is directed towards multistage flash desalination systems.

The attendees will have the opportunity to be exposed to the recent developments in this area. Desalination technologies are overviewed, effect of the different operational parameters on multi – stage flash systems (MSF) are given. Design, operation and maintenance of MSF are presented. Full and part load operations are illustrated in connection with control systems.
