Programming in HTML5 with JavaScript and CSS3

Course Introduction

This training course provides an introduction to HTML5, CSS3, and JavaScript. This is designed to help participants gain the fundamental HTML5/CSS3/JavaScript programming skills.

This course is an entry point into both the Web application and Windows Store apps training paths. This will focus on using HTML5/CSS3/JavaScript to implement programming logic, define and use variables, perform looping and branching, develop user interfaces, capture and validate user input, store data, and create a well-structured application. This course uses Visual Studio 2017, running on Windows 10.

Target Audience

- ✓ Cloud Computing Engineer
- ✓ Computer Network Specialist
- ✓ Computer Support Specialist
- ✓ Database Administrator
- ✓ Information Technology Analyst
- ✓ Information Technology Leadership
- ✓ Information Security Specialist
- ✓ Software/Application Developer
- ✓ Web Developer
- ✓ Technology sales consultant

Programming in HTML5 with JavaScript and CSS3

Learning Objectives

- ✓ Gain a comprehensive understanding of how to use Visual Studio 2017.
- ✓ Learn the new features of HTML5, create and style HTML5 pages by using CSS3, and run web applications.
- ✓ Add interactivity to an HTML5 page by using JavaScript.
- ✓ Create HTML5 forms by using different input types, and validate user input by using HTML5 attributes and JavaScript code.
- ✓ Send and receive data to and from a remote data source by using XMLHttpRequest objects and the Fetch API.
- ✓ Create well-structured and easily maintainable JavaScript code.
- ✓ Write modern JavaScript code and use Babel to make it compatible with all browsers.
- ✓ Use common HTML5 APIs in interactive Web applications.
- ✓ Create Web applications that support offline operations.
- ✓ Create HTML5 Web pages that can adapt to different devices and form factors.
- ✓ Add advanced graphics to an HTML5 page by using Canvas elements and by using Scalable Vector Graphics.
- ✓ Enhance the user experience by adding animations to an HTML5 page.
- ✓ Use Web Sockets to send and receive data between a Web application and a server.

- ✓ Improve the responsiveness of a Web application that performs long-running operations by using Web Worker processes.
- ✓ Use WebPack to package web applications for production.
