Effective management of financial crisis

Course Introduction

Financial crises are among the hardest and could bring the costliest damage to a business or society. With crises triggered by everything from stocks and unsustainable levels of public and private indebtedness. Whichever way each crisis has occurred, the consequences for public finances, firms, and households have often been severe and lasting. Despite the development of digital technologies and the power of digitalization to transform business systems and models, many are still facing crises and challenges unique to the financial industry.

The financial system

The matter of how a crisis can best be managed depends ultimately on two factors: whether there is a risk of the crisis causing serious disruption in the financial system, and whether the troubled institution is considered viable. This training course is designed to provide participants with the relevant knowledge on different crisis management approaches should any respective company they belong to face financial instability.
