Financial Management of Energy Projects

Course Introduction

Managing finances for energy projects involves careful planning and structuring to ensure sufficient capital is raised and effectively allocated to various project phases. It also requires ongoing financial monitoring and risk management to address cost overruns, regulatory changes, and market fluctuations, ensuring the project's financial viability and sustainability.

This training course is designed to provide participants with essential knowledge and practical skills to manage the financial aspects of energy projects effectively. Covering a range of topics from basic financial principles and project planning to risk management and sustainable financing options, the course is designed to equip professionals with the tools needed to navigate the complexities of financing energy initiatives. Through a mix of theoretical learning, practical exercises, and real-world case studies, participants will gain a deep understanding of financial structuring, analysis, and performance monitoring specific to the energy sector.

Training Course Methodology

This course is designed to be interactive and participatory, and includes various learning tools to enable the participants to function effectively and efficiently. The course will use sessions, exercises,

and case applications, and a presentation about proven-by-practice methods, new insights, and ideas about emotional intelligence and its effects in the corporate world.
