## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Course Introduction

This advanced course provides hands-on training in using data science tools and big data analytics to drive predictive maintenance strategies.

Participants will learn how to collect, process, and analyze large-scale equipment and sensor data, build machine learning models to forecast equipment failures, and optimize maintenance planning. Designed for data scientists, maintenance engineers, and analytics professionals, the course equips attendees with the knowledge and technical skills to shift from reactive to proactive maintenance using modern data-driven methodologies.

## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Learning Objectives

- ✓ Understand the principles of predictive and proactive maintenance.
- ✓ Work with large-scale equipment and sensor datasets for analysis.
- ✓ Apply data science workflows to real-world maintenance problems.
- ✓ Use tools such as Python, Jupyter, Pandas, and Scikit-learn for model development.
- ✓ Build, validate, and deploy machine learning models for failure prediction.
- ✓ Apply big data concepts (e.g., Spark, time-series databases) in scalable environments.
- ✓ Translate predictive insights into actionable maintenance strategies.

## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Course Outline

#### ✓ DAY 01

##### **Module 1: Foundations of Predictive Maintenance and Data Handling**

##### **Introduction to Predictive and Proactive Maintenance**

- ✓ Maintenance strategies: reactive, preventive, condition-based, predictive
- ✓ The business value of predictive maintenance
- ✓ Data-driven maintenance decision-making

##### **Data Collection and Management**

- ✓ Overview of data sources: SCADA, sensors, logs, CMMS
- ✓ Data acquisition techniques (e.g., MQTT, OPC-UA, APIs)
- ✓ Cleaning and preprocessing maintenance datasets
- ✓ Time-series data fundamentals and challenges

ABU DHABI: +971 2 449 6000

ABU DHABI: +971 50 412 3294

DUBAI: +971 4 888 6787

KSA: +966 56 416 0617

EGYPT: +20 127 111 1770

## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Course Outline

#### ✓ Day 02

##### **Module 2: Foundations of Predictive Maintenance and Data Handling**

###### **Tools & Platforms Overview**

- ✓ Data science stack: Python, Pandas, Numpy, Scikit-learn
- ✓ Big data platforms: Hadoop, Apache Spark, Kafka (intro level)
- ✓ Industrial data platforms (OSIsoft PI, Azure IoT, AWS IoT, etc.)

##### **Module 3: Predictive Modeling and Feature Engineering**

###### **Feature Engineering for Maintenance**

- ✓ Creating features from time-series data
- ✓ Statistical summaries, rolling windows, and lag features
- ✓ Domain-specific feature extraction (vibration, temperature, cycles)

## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Course Outline

#### ✓ Day 03

##### **Machine Learning for Failure Prediction**

- ✓ Classification models: Decision Trees, Random Forest, Gradient Boosting
- ✓ Regression models for Remaining Useful Life (RUL)
- ✓ Model evaluation: confusion matrix, ROC, precision/recall

##### **Anomaly Detection and Advanced Models**

- ✓ Unsupervised learning for anomaly detection (K-Means, Isolation Forest)
- ✓ Predictive maintenance using Deep Learning (e.g., LSTM basics)
- ✓ Intro to survival analysis and reliability modeling

## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Course Outline

#### ✓ Day 04

#### **Module 4: Strategy, Deployment, and Optimization**

#### **Scalable Architecture and Data Pipelines**

- ✓ Real-time vs. batch processing
- ✓ Building a data pipeline for streaming equipment data
- ✓ Integration with CMMS and ERP systems

ABU DHABI: +971 2 449 6000

ABU DHABI: +971 50 412 3294

## Predictive Maintenance with Data Science Tools and Big Data Analytics

### Course Outline

#### ✓ Day 05

##### **Module 5: Strategy, Deployment, and Optimization**

##### **From Model to Maintenance Action**

- ✓ Interpreting model results for operational decisions
- ✓ Setting thresholds, alerts, and maintenance triggers
- ✓ Building dashboards (Power BI, Grafana, Kibana overview)
