Supply Chain Resilience in Times of Disruption

Course Introduction

This training is designed by Boost to help supply chain leaders and professionals develop the capabilities to withstand, adapt to, and recover from disruptions. In an era marked by pandemics, geopolitical tensions, natural disasters, and cyber risks, resilience has become a top priority for global supply chains. Traditional efficiency-focused models are no longer sufficient; organizations need strategies that balance cost-effectiveness with agility, redundancy, and risk management.

Participants will learn how to assess vulnerabilities, design resilient supply chain networks, and implement frameworks that prepare organizations for unexpected shocks. Through interactive exercises and case studies, the program will demonstrate how to embed resilience into supply chain planning, supplier management, logistics, and technology systems.
