## CIO program

### Course Introduction

The role of the Chief Information Officer (CIO) has evolved significantly beyond managing IT systems and infrastructure. Today's CIO is a strategic leader responsible for aligning technology with business objectives, enabling digital transformation, managing risk, and driving innovation across the organization.

Developed by **Boost**, this program is designed to provide current and aspiring CIOs, IT leaders, and senior managers with a business-driven perspective on the CIO role. The course focuses on leadership, governance, strategic alignment, and decision-making—rather than technical architecture or vendor-specific technologies.

**Boost's CIO Program** equips participants with the mindset and frameworks required to lead technology functions as strategic business enablers.
