## ERP - Advanced

### Course Introduction

At advanced levels, the challenge is no longer implementing an ERP system—but making it deliver sustained business value. Many organizations invest heavily in ERP platforms yet struggle with underutilization, weak adoption, misaligned processes, and limited decision impact.

Developed by **Boost**, this course reframes ERP as an enterprise operating platform, not an IT system. Participants learn how to govern ERP usage, optimize end-to-end processes, integrate data and reporting, manage change, and continuously enhance value—while avoiding vendor-driven complexity.

**Boost's ERP - Advanced course** enables organizations to move from “using ERP” to leading with ERP.
