Supply Chain Risk Management and Vulnerability

Course Introduction

Modern supply chains are increasingly exposed to disruptions caused by global uncertainties, supplier dependencies, geopolitical events, operational failures, and unexpected demand or supply shocks. Traditional supply chain planning alone is no longer sufficient to ensure continuity and resilience.

Developed by **Boost**, this course introduces a risk-based and vulnerability-focused approach to supply chain management. Participants will learn how to identify, assess, and manage supply chain risks by understanding where vulnerabilities exist across suppliers, logistics, processes, and information flows.

Boost's Supply Chain Risk Management and Vulnerability - Intermediate course equips professionals with practical tools to enhance supply chain resilience and reduce exposure to disruptions.
