Certificate in Security Management - Intermediate Level

Course Introduction

Security management has become a critical organizational function in an era characterized by complex threats, operational risks, regulatory requirements, and heightened stakeholder expectations. Organizations today must protect not only physical assets and people, but also information, infrastructure, reputation, and continuity of operations. Effective security management requires structured planning, risk-based decision-making, and strong coordination across multiple functions.

To support this need, **BOOST** has developed the **Certificate in Security Management course** as part of its professional development portfolio for professionals who already have basic exposure to security, safety, or risk-related roles and are ready to advance their capabilities to an intermediate level. The program focuses on building a comprehensive understanding of modern security management practices and how they are applied within organizational environments.

The course emphasizes the integration of security with organizational strategy, governance, and operations. Participants explore how security risks are identified, assessed, and managed, and how security policies, procedures, and controls are designed to

protect people, assets, and operations while supporting business objectives.

Through structured frameworks, applied examples, and scenario-based discussions, participants strengthen their ability to plan, manage, and evaluate security activities effectively, communicate security risks clearly, and contribute to a resilient and well-governed security function.
