Sustainability in Procurement and Supply Chain

Course Introduction

Sustainability has become a central priority for organizations seeking long-term resilience, regulatory compliance, and responsible growth. Procurement and supply chain functions play a pivotal role in achieving sustainability objectives, as their decisions directly influence environmental impact, social responsibility, cost efficiency, and supplier behavior across the value chain.

To support the integration of sustainability into procurement and supply chain practices, **BOOST** has developed the **Sustainability in Procurement and Supply Chain** course as a structured introduction to sustainability principles and their practical application within procurement and supply chain operations. The program is designed for professionals who are new to sustainability concepts or who are involved in sourcing, purchasing, logistics, or supplier management and need a clear understanding of sustainable practices at a foundational level.

The course focuses on integrating environmental, social, and ethical considerations into procurement and supply chain decision-making. Participants explore how sustainability impacts sourcing strategies, supplier selection, contract management, logistics, and risk

management, while also supporting organizational performance and compliance expectations.

Through practical explanations, real-world examples, and guided discussions, participants gain the awareness and confidence needed to support sustainability initiatives, engage responsibly with suppliers, and contribute to more transparent, ethical, and resilient supply chains.
