Corporate Valuation Techniques and Modelling

Course Introduction

Corporate valuation is a critical skill in finance, investment, strategy, mergers and acquisitions, and corporate decision-making.

Organizations rely on sound valuation techniques to assess business performance, support strategic initiatives, evaluate investment opportunities, and inform negotiations and financial reporting.

The Corporate Valuation Techniques and Modelling course is designed for professionals who already possess a foundational understanding of finance and accounting and are seeking to strengthen their valuation capabilities at an intermediate level.

Within **BOOST**, this program focuses on building practical valuation knowledge supported by structured financial modelling approaches.

The course explores the most widely used corporate valuation techniques, including income-based, market-based, and asset-based approaches, with a strong emphasis on understanding assumptions, drivers of value, and limitations of each method. Participants also gain exposure to financial modelling principles used to translate valuation concepts into structured, decision-ready models.

By combining conceptual clarity with applied modelling insights, this program equips participants with the skills needed to perform and interpret corporate valuations confidently, support informed financial decisions, and communicate valuation outcomes effectively to stakeholders.
