Successful Safe Material Handling During Warehouse Operations

Course Introduction

Warehouses are designed to store finished goods that are moved in and out on pallets. But currently, the warehouse industry is evolving as corporations consider them unnecessary and a cost center. Today, warehouses are promise keepers: Their job is to enable a company's go-to-market strategy and make good on the promises made by the marketing and sales departments. Order turnaround — the time it takes to pick and pack an order so it is ready for pickup by a delivery company before the cut-off time — is measured in hours rather than days. While fully-automated warehouses remain a pipe dream for many e-tailers, many are now using software, automation, and sensors to get closer to their customers.

This training course is designed to provide participants with an in-depth introduction to materials handling and new insights into the new software, equipment, and processes being used in modern warehouses.

Successful Safe Material Handling During Warehouse Operations

Target Audience

- ✓ Procurement Manager / Supervisor
- ✓ Procurement officer/assistant
- ✓ Purchase officer
- ✓ Vendor manager
- ✓ Supplier relationship officer
- ✓ Purchase coordinator
- ✓ International Buyer
- ✓ Category purchasing manager
- ✓ Supply chain officer- Procurements
- ✓ Logistics Professionals
- ✓ Distribution Managers
- ✓ Working in this field
- ✓ Those who want to start a career in this field
