The APICS Certified Supply Chain Professional (CSCP)

Course Introduction

The APICS Certified Supply Chain Professional (CSCP) course is designed for professionals who want to master end-to-end supply chain management and advance their careers in operations, logistics, and global business management. As supply chains become increasingly complex and globalized, organizations need leaders who can optimize processes, enhance efficiency, and drive strategic growth.

This course provides comprehensive insights into supply chain design, planning, execution, and improvement, covering key areas such as demand and supply planning, inventory management, logistics, procurement, and operations strategy. Participants will learn best practices to manage global supply chains, minimize risks, and improve organizational performance.

Through practical case studies, tools, and frameworks, learners will develop the knowledge and skills needed to become effective supply chain professionals, capable of analyzing data, making informed decisions, and implementing strategies that enhance productivity and profitability. The course is ideal for supply chain managers, operations managers, logistics professionals, and anyone seeking to

achieve the APICS CSCP certification and elevate their professional credentials

The APICS Certified Supply Chain Professional (CSCP)

Learning Objectives

- ✓ Learn to collect and analyze historical and environmental demand data, influence demand through marketing activities, and build forecasts to align supply with demand effectively.
- ✓ Gain proficiency in defining and managing the supply chain network, including managing master data for customers, suppliers, products/items, engineering, and logistics, and developing and maintaining reports, analytics, and metrics.
- ✓ Align sourcing activities with demand, effectively manage categories for sourcing products and services, evaluate and select suppliers, and manage purchase orders to optimize the sourcing process.
- ✓ Plan operations, manage inventory efficiently, measure and assess performance, and analyze and utilize applicable continuous improvement philosophies such as lean principles and six sigma.
- ✓ Understand how to define and manage distribution networks, provide distribution services, evaluate trade considerations, design and manage reverse flow, and effectively manage customer and supplier relationships.
