Industrial Building Design and Renovation

Course Introduction

This course should be on the top list of must-take courses for civil engineers across all industries, such as oil and gas, water treatment, power plants, and industrial factory projects. Professionals who intend to enhance their knowledge and skills in the analysis of steel and concrete structures designs, basic and advanced principles of structure renovation, and foundations of renovation will greatly benefit from this course.

What does industrial building design mean?

Industrial building renovation and design is a very critical course for professionals involved in construction in any organisation. This course will give the participants the required skills and in-depth knowledge to stay ahead in their respective industries without breaking a sweat.

What are the different types of industrial buildings?

This course will provide enlightenment into the real structures and illustrations. This will enhance understanding of the design methodologies and be able to practical use of the acquired

knowledge in different industrial buildings and structures. Case studies and relevant examples will be used, ranging from typical two-dimensional beams and frames to the well-known three-dimensional story buildings that use frames to space frames that are used in special systems.

The course will cover different techniques and methods for inspecting, evaluating, and investigating the causes of structural deterioration and the most effective methods for renovation.

This course will feature the following:

- ✓ Methods and techniques used in the renovation
- ✓ Analysis and design of industrial buildings
- ✓ How to select the most suitable structural system and how to prepare the general layout
- ✓ Methods and effective techniques used in structures and industrial buildings investigations
- ✓ Materials to be used for repairing steel structures
- ✓ Applying load combination and load application as per ASCE/UBC/IBC
- ✓ Various methods are used in structural renovation
- ✓ Materials used in concrete structure repairs and renovation

Industrial Building Design and Renovation

Target Audience

- ✓ Construction engineers who are directly involved in designing buildings and structures
- ✓ Consultant engineers who are consulted on buildings and structures design
- ✓ Engineering services companies
- ✓ Design engineers who wish to upgrade their skills
- ✓ Contractor engineers

Industrial Building Design and Renovation

Learning Objectives

- ✓ Thoroughly understand the process of renovating and designing industrial buildings
- ✓ Have a better and improved understanding of the various materials used in the renovation
- ✓ Determine the most convenient geometry, structural system, and various layouts
- ✓ Naturally, investigate and create an assessment report of the building conditions
- ✓ Effectively analyse and design steel and concrete industrial buildings per international guidelines
- ✓ Make accurate decisions on the most appropriate renovation methodologies
- ✓ Effectively apply load and load combination calculations to structural models following international standards

Industrial Building Design and Renovation

Course Outline

✓ DAY 01

Module 1: Designing Steel Structures and Buildings

- ✓ Base plates and anchorage bolts
- ✓ Steel frames design process
- ✓ Crane girders
- ✓ Pipe racks design
- ✓ Design the bracing systems
- ✓ Purlins and side girt design

Module 2: Industrial Buildings Renovation

- ✓ Why industrial buildings must be renovated
- ✓ Building expansion
- ✓ Using CFRP for structural strengthening
- ✓ Primary framing strengthening to handle vertical loads
- ✓ Concrete usage
- ✓ Using metal building systems
- ✓ Using steel structures

Industrial Building Design and Renovation

Course Outline

✓ Day 02

Module 3: Other Renovations

- ✓ Wind and seismic retrofit
- ✓ Renovation of slabs on grade
- ✓ Anchorage strengthening and embedment
- ✓ Foundation strengthening
- ✓ How to add new equipment to existing buildings

Module 4: Factors Affecting Renovation Period

- ✓ Location
- ✓ Regional location
- ✓ Rural
- ✓ The location details
- ✓ Urban
- ✓ Commercial adaptive re-use
- ✓ Cultural use
- ✓ Mixed-use
- ✓ Monument and process

ROOST

Industrial Building Design and Renovation

Course Outline

✓ Day 03

Module 5: Evaluation Process for Building

- ✓ Structure and cladding
- ✓ Fire safety
- ✓ Site coverage
- ✓ Lighting
- ✓ Services
- ✓ Plan and configuration

Module 6: Understanding Building Evaluation

- ✓ Ultrasonic and infrared
- ✓ Methods of inspection and evaluation of industrial buildings
- ✓ Methods of protection
- ✓ Concrete crack types
- ✓ Selecting the repair of the material
- ✓ Cathodic protection
- ✓ Corrosion phenomena

Industrial Building Design and Renovation

Course Outline

✓ Day 04

Module 7: Creating Cost-effective Geometry Calculation of Different Loads

- ✓ Load combination
- ✓ Creating a structural layout
- ✓ Wind loads
- ✓ Standards and procedure
- ✓ Load resisting systems
- ✓ Obtaining the design data
- ✓ Controlling factors
- ✓ Parameters in the calculations of wind loads
- ✓ Design criteria
- ✓ Seismic loads
- ✓ Design approach
- ✓ Standards
- ✓ Detailing requirements
- ✓ Procedures used to get the seismic loads
- ✓ Sources
- ✓ Loads
- ✓ Load resisting systems

Module 8: Concrete Building Design for Industrial Use

- ✓ Designing frames

- ✓ Designing concrete beams for shear and torsion
- ✓ Liquid or earth retaining structures
- ✓ Designing concrete stairs
- ✓ Concrete slab design
- ✓ Tank's foundation design
- ✓ Foundations
- ✓ Shallow
- ✓ Deep
- ✓ Concrete columns design
- ✓ Vibrating equipment foundation design

Industrial Building Design and Renovation

Course Outline

✓ Day 05

Module 9: Reviving Industrial Buildings

- ✓ Introduction to balancing preservation and change
- ✓ Site clearance
- ✓ Area protection
- ✓ Decline and dereliction
- ✓ Inner-city industrial quarters
- ✓ From renewal to regeneration

ABU DHABI: +971 2 449 6000
