## Certificate in Strategic Thinking & Planning

### Course Introduction

Strategy has never been more challenging and important than in today's competitive global environment, in which corporate strategies must transcend the borders of nations and markets. Dealing with limited resources, a changing environment, and the need to continuously evolve is a reality for all businesses, even giant corporations. Strategic thinking and planning enable a business owner to determine how to use these resources most effectively and advance the company toward its objectives, and help the company avoid costly mistakes, such as opening a new retail location before the customer population is large enough to support it.

This training course is designed to provide participants with a comprehensive guide to formulate, develop, and implement plans to achieve strategic goals and vision. This course focuses on the steps needed to develop effective strategies and translate it into a business plan that provides the foundation for achieving strategic alignment of operational plans and objectives with the business model.
