ISO 31000 Risk Management - Lead Auditor

Course Introduction

Risk is a necessary part of doing business, and in a world where enormous amounts of data are being processed at increasingly rapid rates, identifying and mitigating risks is a challenge for any company.

ISO 31000 can help organizations increase the likelihood of achieving objectives, improve the identification of opportunities and threats, and effectively allocate and use resources for risk treatment. In addition to addressing operational continuity, **ISO 31000** provides a level of reassurance in terms of economic resilience, professional reputation, and environmental and safety outcomes. In a world of uncertainty, ISO 31000 is tailor-made for any organization seeking clear guidance on risk management.

This training course is designed to provide participants with the principles of risk management, the framework, and processes to follow. This course focuses on the main components of **ISO 31000**: basic terms and definitions, principles of risk management, risk management framework, and risk management process. In addition, each step of the risk management process is analyzed and elaborated individually.
